## "SURPRISE"

If you want a thrill

**SOW GULDEMOND'S "SURPRISE" GARDEN OF ANNUALS**

There are more than one hundred different varieties in this mixture of seeds.

Sow the seeds as soon as the ground becomes warm, in rows from 8 to 10 inches apart. Do not let the seed bed dry out. Thin seedlings to give the young plants room to develop. They should be spaced about 8 inches apart. AND BE SURE TO KEEP THE WEEDS DOWN. By following the above simple instructions you will have a lovely flower garden from early summer till frost.

**LARGE PACKET, 25c Postpaid**

## TERMS

All prices in this catalogue subject to change without notice.

All seed orders sent prepaid to U. S. points at catalogue prices.

**Suggestions For Sowing Seeds During the Summer Months**

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snapdragon, and finer perennial seeds, etc. should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, then taken to greenhouse and some cheesecloth placed over them until the seedlings are of sufficient strength to have it removed.

## TRYSONIC STOCKS

This new strain of Stock has been in process of development since 1915, but only in the last ten years have experiments come to a conclusion. Trysomics, when grown from seed, come 85% double. At the four leaf seedling stage, the singles are noticeable weaker. When these are removed, it is possible to have a planting of 100% doubles. In all other respects the Trysomic is identical with other double strains.
